FICCI Learning Mission on Manufacturing Excellence
Visit to Hyundai Motor India Ltd. and Saint-Gobain World Glass Complex

4 September 2026 | Sriperumbudur, Tamil Nadu

FICCI Tamil Nadu State Council organized a **Learning Mission on Manufacturing Excellence** on **4 September 2026**, providing industry representatives with an opportunity to gain first-hand exposure to leading manufacturing practices, operational excellence, sustainability initiatives, digital transformation, and Environment, Health and Safety (EHS) practices. The Learning Mission comprised visits to the **Hyundai Motor India Ltd. (HMIL) Manufacturing Plant** and the **Saint-Gobain World Glass Complex** at Sriperumbudur. The programme was designed to facilitate practical knowledge sharing and peer learning by providing participants with an understanding of manufacturing processes and best practices adopted by leading industrial organisations.

The programme commenced with the delegation assembling at the **FICCI Tamil Nadu State Council office, Nungambakkam**, following which the participants proceeded to the **Hyundai Motor India Ltd. (HMIL) Sriperumbudur Plant**. The visit included a comprehensive company briefing and a guided **factory tour**, providing participants with an opportunity to understand the manufacturing environment, production processes, operational systems, and practices followed at one of India's leading automobile manufacturing facilities. The interaction enabled the participating delegates to gain practical insights into large-scale manufacturing operations and the importance of operational discipline and process efficiency.

The delegation subsequently proceeded to the **Saint-Gobain World Glass Complex, Sriperumbudur**, for the second part of the Learning Mission. The programme featured a detailed overview of **Saint-Gobain's sustainability initiatives and digital transformation initiatives**, highlighting the role of technology and sustainable practices in strengthening manufacturing competitiveness. The sessions provided participants with insights into how digitalisation and sustainability can be integrated into manufacturing operations to improve efficiency, resource utilisation, and long-term business performance.

As part of the plant visit, participants underwent an **Environment, Health and Safety (EHS) induction** and were provided with the necessary personal protective equipment prior to entering the manufacturing facility. The delegation then undertook a guided **line visit at F5**, enabling participants to observe manufacturing processes and operational practices at close quarters. The plant visit offered valuable practical exposure to manufacturing systems and reinforced the importance of safety, process discipline, automation, quality, and operational excellence in industrial environments.

The Learning Mission also featured an **interactive Q&A session with Saint-Gobain leaders**, allowing participants to engage directly with the company's leadership team and seek insights into manufacturing excellence, sustainability, digital transformation, EHS practices, and operational challenges. The interaction provided an effective platform for industry participants to exchange experiences and understand the approaches adopted by a global manufacturing organisation in continuously improving its operations.

The Learning Mission concluded with the return journey to Chennai. The programme provided participants with a valuable opportunity to learn from established manufacturing organisations and understand the practical implementation of **manufacturing excellence, digital transformation, sustainability, workplace safety, and operational efficiency**. The initiative also reinforced FICCI Tamil Nadu State Council's efforts to facilitate industry-to-industry learning and promote the adoption of globally benchmarked manufacturing practices among participating companies.
