**INTRODUCTION**

Deterioration in air quality due to pollution is a pertinent global problem. Reducing industrial emissions so as to minimize its environmental & health effects is a major concern in developing economy like India. Many Industries in India are inadequately equipped with Pollution Control Measures. There are a number of Air Pollution Control and Monitoring Technologies available in the market, but it is difficult to make decisions in choosing the most suitable technologies, especially due to absence of comparative assessments, expert's opinions and lack of knowledge on efficient latest technologies. Many large polluting industries have some Pollution Control Plants installed already but could not be used properly either for deficiency in equipment design or deficiency in the system design or both. Therefore, Improvisation and innovative ideas for air pollution prevention control & monitoring are the requirements of the day.

**OBJECTIVES**

- ❖ To highlight and share the latest technologies available for Air Pollution Control and Monitoring
- ❖ To address various issues & problems related to O&M of Air Pollution Control & Monitoring Equipments
- ❖ To provide extensive knowledge to participants for selection of APCDs and optimizing the use of air pollution control systems to ensure maximum efficiency and productivity
- ❖ To learn basics of various types of APCD Designs, to enable evaluate the suppliers offers
- ❖ Cost-effective control of fugitive emissions
