NAVAL AVIATION INDIGENISATION ROADMAP (2017-2022)

DIRECTORATE OF AIR PROJECTS AND PLANS, IHQ MOD(NAVY)

PREFACE

1. Naval Aviation, over the last six and a half decades, has been effectively operating and maintaining about fifteen types of aircraft and their associated equipment. The *IN*'s aircraft inventory ranges from the vintage to the modern with a bulk of it from abroad. 'Indigenisation' in aviation therefore, is inherently beset with several challenges – limited numbers, impending draw-down of some platforms, stringent specifications, long-winded procedures for flight trials, certification and so on. The need for self reliance is obvious on any nation, but this was further accentuated in the post Pokhran-II era, when several aircraft gear boxes and other components were held captive abroad and new technology denied. The Indigenisation efforts embarked upon thereafter have yielded several dividends thus far in terms of indigenous equipment, manufacture of consumables, ground support equipment, fast moving items such as tyres, batteries and in-country repairs. The facilities commissioned at Naval Aircraft Yard (Kochi) for repair, overhaul, testing of Sea Harrier engines, generic Avionics repair and software development, and a host of other workshops are testimony to this.

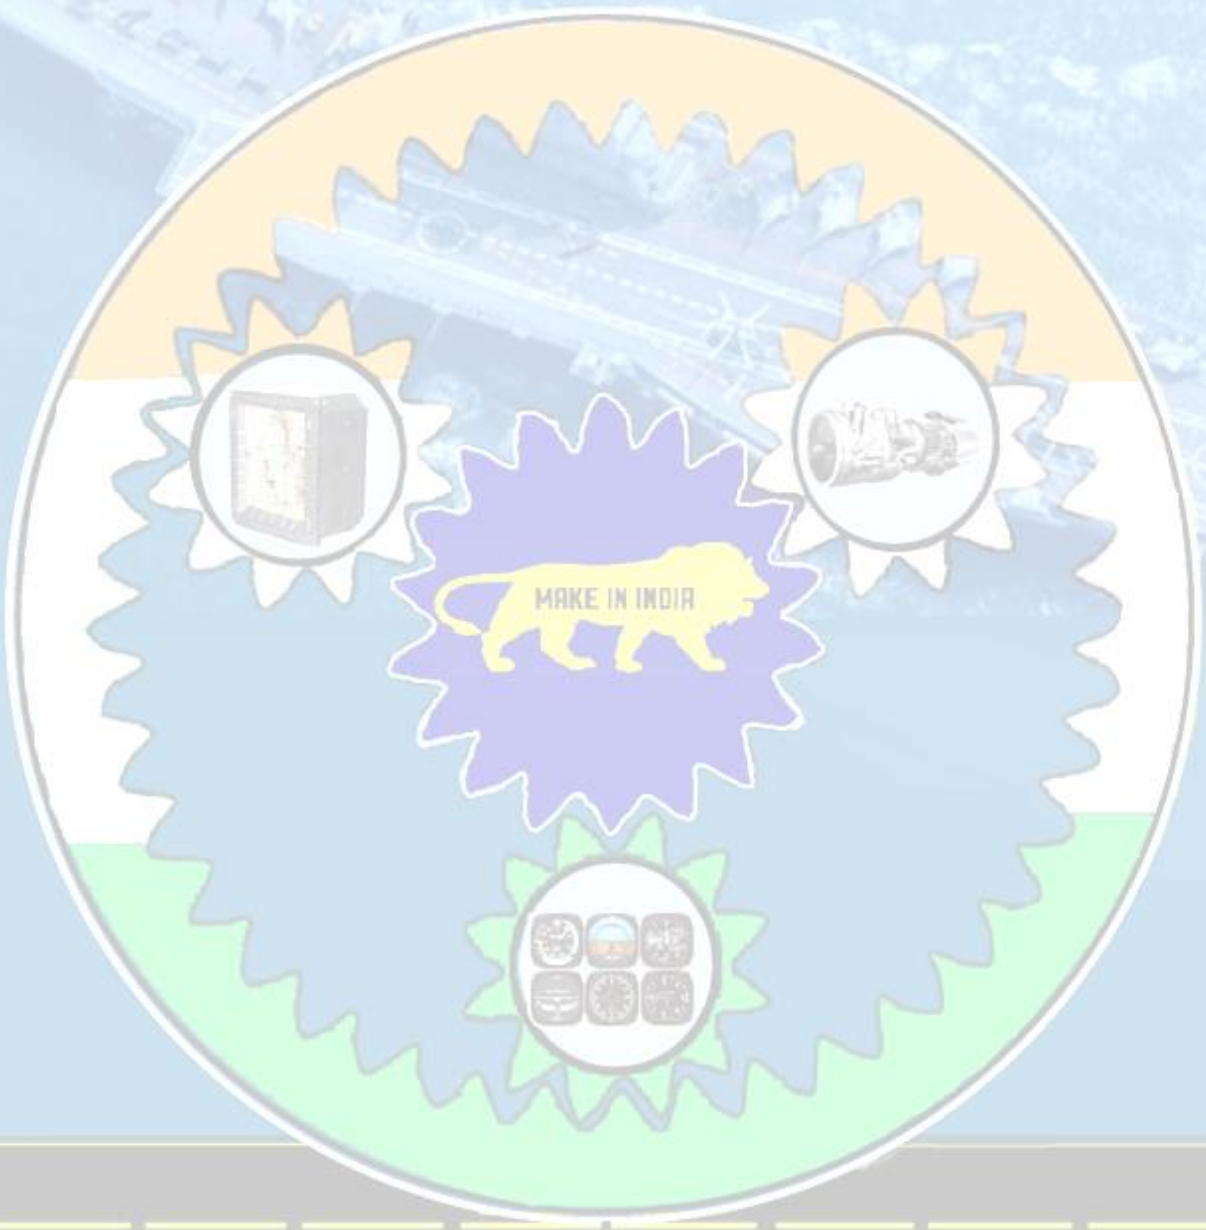

2. The two Naval Aircraft Yards at Kochi and Goa, along with the Naval Aircraft Servicing and Development Organisation (NASDO) at Goa, spearhead aviation's Indigenisation efforts. NAY (Goa) is responsible for Russian origin spares, NAY (Kochi) for Western Origin spares and NASDO focuses on common equipment. These organisations are known as the 'Inhouse Indigenisation Committees (IICs)'. The aviation's indigenisation process is governed by the stringent procedures for Design Development and Production of Military Airborne Stores, a CEMILAC document. Whilst sustenance of legacy systems and battling obsolescence of ageing fleet would continue to seek focused attention, seamless integration and self reliance on maintenance of newer platforms will play a crucial role in mission worthy aspects of our aviation assets.

3. Naval aviation has adopted a multi pronged strategy to enhance self reliance which involves, 'Make' Projects, initiatives under the aegis of 'Technology Development Fund' of the DRDO and several Indigenisation cases taken up by the IICs. Self reliance through In-country repairs is also being pursued relentlessly through the DRDO, DPSUs and capable private Firms. While the large 'Make' projects find mention in the 'Indian Navy Indigenisation Plan 2015-30', this document encapsulates the items under the ambit of the IICs, to be indigenised in the next five years. About 126 Flight Critical (FC) and 429 Non Flight Critical (NFC) spares have been identified covering all inventories. The concerted efforts of all stake holders would ensure that Indigenisation of equipment mentioned in this Aviation Roadmap 2017-22 is achieved and paves the way for further self-reliance.
