

WEBINAR ON DESIGN FOR EMERGING TECH IN MANUFACTURING

FUTURE OF PRODUCT DESIGN

Date: 4th May 2020 | Time: 11.00 am

Objective:

- This webinar will help to understand how to increase Quality of the Product Design's as well as the production time of goods and services.
- Emergence of lightweight materials and additive manufacturing techniques to improve process challenges as well as immense opportunities to the Manufacturing Industries.
- Create the Environments that make Great Products that are faster to design, better in performance and at the same time easier to manufacture.

Agenda:

- Benefits of cloud enabled integrated CAD/CAM/CAE platforms
- Payback of generative Design Technology in Today's world of Manufacturing
- It will cover some major use cases from industries to showcase the designing using Fusion 360 technology, followed up with question and answer round.

Who Should Attend:

- Personnel from Design Engineer
- Application Engineer
- Mechanical Engineer
- Industrial Engineer
- Director of Product Development Engineering
- Manager
- Manufacturing Engineer
- CAD Design
- CNC Machinist

Note: webinar link will send you closer to the date

For more details please contact:

Mr. Darshit Bhatt / Mr. Amit Bhavsar
